

SSP Blue’s Investigative Intelligence provides law firms the most effective way to conduct an open source intelligence (OSINT) investigation of clients, opposing parties, potential and seated jurors, experts, and judges. We find persuasive, useful, available, and admissible evidence.

SSP Blue utilizes highly skilled military trained cyber intel analysts with a specialized set of tools and technologies not available to the public to identify and provide actionable intel that helps lawyers win their cases. Our OSINT investigations comply with ABA Model Rule 4.2 and are in line with state ethical rules that define attorney ethics in OSINT investigations.

Achilles Risk Profile

We conduct an “Achilles Risk Profile” of potential witness, party, expert, or juror to identify actionable intelligence on any issue. SSP Blue establishes histories of persons and entities, links and connections, activities and behavioral patterns, strengths and vulnerabilities.

- Compile intelligence on opposing litigants to expose bias
- Conduct social media background research on potential jurors in multi-million dollar cases
- Locate a missing witness using social media sites, even if the witness did not have a profile—her young daughter did
- Use information from a judge’s profile to get judges disqualified from cases (primarily based on bias)
- Locate an elusive individual and serve her based on information the individual had posted in her social media profiles
- Create detailed work-up of a potential juror
- Assist forensic accountants to investigate fraud or embezzlement and to analyze financial information for use in legal proceedings

Achilles Awareness Monitoring

People and entities are increasingly active online. We put targets on what we call "Achilles Awareness Monitoring" to identify postings that may be useful in legal proceedings.

SSP Blue uses technologies not available to the public to monitor the public, deep, and dark web to identify ongoing actionable intelligence.

- Monitoring covers any social media site including Twitter, Facebook, Instagram, YouTube, Tumblr, SnapChat, the Deep and Dark Web
- Ability to search and analyze Twitter's private "firehose" of Tweets to find tweets by adversaries, witnesses, experts, and jurors
- Geo-fence online monitoring to gain situational awareness during heated legal battles
- Using highly specialized technologies not available to the public backed by cyber analysts
- Monitor patterns of life to provide intel that helps forensic accountants find hidden assets, evidence of fraud, or unauthorized use of funds

SSP Blue welcomes the opportunity to discuss with your firm how our services can help you win.

Founder of SSP Blue, Hemu Nigam, is a former federal prosecutor against online crimes and former chief security and privacy officer of News Corporation, Fox, and MySpace. He oversaw globally 40+ digital properties including FoxSports.com, AmericanIdol.com, MySpace.com, and had teams on the ground in EMEA, APAC, SAPAC, and LatAm. Hemu has held top secret clearance in both the public and private sectors. Our team consists of top secret cleared, ex-military online counter-intelligence officers who have served in active combat in several of the armed services, prior to joining us. Given this expertise, we have authorized access to specialized investigative intelligence tools that are not available to the general public.
